                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Arabidopsis S-adenosyl-L-homocysteine hydrolase (SHH) (AAW01459) catalyses the reversible hydrolysis of S-adenosyl-L-homocysteine to adenosine and homocysteine. Its amino acid sequence was deduced from the SHH gene (AAT44515) isolated from an Arabidopsis genomic DNA library. The promoter of the Arabidopsis SHH gene is useful for the expression of effector genes in transgenic plants.

```
Asparagus S-adenosyl-L-homocysteine hydrolase (SHH) (AAW01458) catalyses the reversible hydrolysis of S-adenosyl-L-homocysteine to adenosine and homocysteine. It contains an extra stretch of amino acid residues (postitions 150-190) previously found in other photosynthetic species, parsley and Rhodobacter capsulatus, but not in SHHs from non-photosynthetic species. A cDNA sequence (AAP14513) coding for the asparagus was used to identify the Arabidopsis thaliana SHH gene (AAP14515) and promoter (AAP14514), useful for expression of effector genes in transgenic plants.
                                                                                                                                   S-adenosyl-L-homocysteine hydrolase, SHH; promoter; monocot; dicot; transgenic plant; disease resistance; pathogen resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S-adenosyl-L-homocysteine hydrolase promoter - used for driving expression of effector genes, such as pathogen resistance genes, in

Five-day old seedling roots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) CDNA phagemids. These steps were performed in the TJ Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Xu, Frisch, Henry, Simmons, Oates Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of

Wise lab at lows State University, Ames, IR; 7 day old

Wise Blumeria graminis f. sp. hordei, and leaves were

// Arwellang were challenged with isolate A27 (Arrwhall)

// Alabohosted 20 and 24 hr post-inoculation and snap frozen;

uninoculated leaves were harvested 20 hr post-inoculation

(Wei, Wise). In the TJ Close lab at the University of

Callifornia, Riverside, total RNA was prepared from each

sample pool, equal quantities of all three RNA pools were

combined, poly(A) RNA was purified from the mixture, one

combined, poly(A) RNA was purified from the mixture, one

contised to give paluescript SK(·) conA phagemids (Choi,

close). Phagemids were plated and picked at the Clemson

University Genomics Institute (CUGI) (Begum, Palmer,

Krisch, Atkins and Wing). Plasmid DNA preparations, DNA

Sequencing and sequence analysis were performed at CUGI

(Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main).

The sequence has been trimmed to remove vector sequence

and contains a minimum of 100 bases of phreed value 20 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.genome.clemson.edu/projects/barley. /Acce="Vector: lambdaZAP; Site_1: ECOR1; Site_2: Xhol; Seeds were surface sterilized then germinated under axenic conditions in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedling roots were then harvested, total RNA was prepared, polyfAh RNA was purlified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Wing, R., Close, T.J., Kleinhofs, A., Wise, R., Begum, D., Frisch, D., Yu Wing, R., Close, T.J., Kleinhofs, A., Wise, R., Begum, D., Frisch, D., Yu, Y., Henry, D., Palmer, M., Rambo, T., Simmons, J., Choi, D.W., Fenton, R.D., Oates, R. and Main, R.D., Development of a genetically and physically anchored EST resource for barley genomics: Morex unstressed seedling root cDNA library Unpublished (2001)

preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see
                                                                                                                                                                   http://www.genome.lemson.edu/projects/barley. /noce="Weetor: lambdaZAP; Site_1: ECORI; Site_2: Xhol; Wise lab at Iowa State University, Ames, IA; 7 day old green seedlings were challenged with isolate 5874 (avrwla6) of Blumeria graminis f. sp. hordel, and leaves were harvested 20 and 24 hr post-inoculation and snap frozen; uninoculated leaves were harvested 20 hr post-inoculation and snap frozen; uninoculated leaves were harvested 20 hr post-inoculation (Nei, Wise). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and I million pru were in vivo excised to give pBluescript SK(-) cDNA phagemids (Choi, Close). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequence and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates Rambo, Maln). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. /_orde="Vector: pBluescriptSkmcUadapt; Site_1: EcoR1; Site_2: XhoI; supplier: Boyce Thompson Institute; sequencing: The Institute for Genomic Research. Fruit were harvested at the breaker stage (first sign of lycopene accumulation on the blossom end of fruit). Fruit were cut in half and the seeds and locules were discarded prior to freezing the pericarp."

/do_xrel="taxon:3050"
/clone_lib="C: reinhardtii CC-1690, Stress condition I,
normalized, Lambda Zap II"
/note="Wector: pBluescript II SK-; Site_1: ECORI; Site_2:
xhoi; This library, constructed by John Davies and Jeffrey
McDermott, combines CDNAs from CC-1690 cells grown to
mid-log phase in TAP-N (30 min, lhr, 4hr). TAP-S (30 min,
lhr, 4hr), TAR-P (4hr, 12hr, 24hr), NO3 to NH4 (30min, lhr
, 4hr) and NH4 to NO3 (30min, lhr, 4hr). PolyA mRNA was
purified from each sample, pooled and cDNA synthesized.
The cDNA was directionally cloned into lambda Zap II
(Stratagene) in the ECORI (5') and XhORI (3') sites:
pBluescript II SK--plasmids were excised from the lambda
zAP clones by superinfection with ExAssist (Stratagene)
phage. The library was normalized using method 4 described
in Bonaldo et al (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1076 ttgatacagatggcctcatgaaatacccaggcatcaagcacatcccaatcaagccagaat 1135

Seeds were surface sterilized then germinated under axenic
Seeds were surface sterilized then germinated under axenic
conditions in the dark at room temperature on filter paper
with water, nystatin and cefotaxime in covered
crystallization dishes. Five-day old seedling roots were
then harvested, total RNA was prepared, poly(A) RNA was
purified, one primary unamplified cDNA library was made,
and 1 million pfu were in vivo excised to give paluescript
SK(-) cDNA phagemids. These steps were performed in the TJ
Close laboratory at the University of California,
Riverside (Choi, Close, Fenton). Phagemids were plated and
picked at the Clemson University Genomics Institute (CUGI)
(Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA
preparations, DNA sequencing and sequence analysis were
performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates
Rambo, Main). The sequence has been trimmed to remove
vector sequence and contains a minimum of 100 bases of
phred value 20 or above. For more details on library
preparation and sequence analysis see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Wing, K., Close, T.J., Kleinhofs, A., Wise, R., Begum, D., Frisch, D., Yu, Y., Henry, D., Palmer, M., Rambo, T., Simmons, J., Choi, D.W., Fenton, R.D., Oates, R. and Main, D.
Development of a genetically and physically anchored EST resource for barley genomics: Morex unstressed seedling root cDNA library Unpublished (2001)
On Nov 16, 2000 this sequence version replaced gi:11185881.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnollophyta; Liliopsida; Poales; Poaceae; Pooldeae; Triticeae; Hordeum.

The present sequence for His-SAHH represents a novel recombinant gene sequence for Trichomonas vaginalis S-adenosyl homocysteinase (SAHH, S-adenosyl homocysteinase). The wild type SAHH gene sequence (AASO9277) is used to generate the His-SAHH gene sequence (AASO9277) is used to generate the His-SAHH gene sequence which comprises various point mutations and an additional polynucleotide sequence which encodes for an extra 6 N-terminal histidine residues.

The invention relates to a method for assessing therapeutic levels of S-adenosylmethionine (SAM) in a biological fluid sample comprising measuring one or more reaction products in a sample containing glycine N-methyltransferase (GMT). SAHH or His-SAHH, and glycine, where the level of one or more products is directly proportional to the level of SAM in the sample. The method is useful contained to the level of SAM in the sample. The method is useful to a used as a part of a diagnostic protocol or as part of a therapeutic brotocol, where conditions or progress of the therapy may be monitored. SAHH may be used as a reagent, particularly in screening for inhibitors and inactivators of the enzyme for use as reagents themselves as potential therapeutics, e.g. in cancer, malaria, arthritis and other contained.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Assessing therapeutic levels of S-adenosylmethionine comprises measuring reaction products in sample containing glycine N-methyltransferase, (His) S-adenosyl homocysteine hydrolase and
